

Extra performance for Class A fires

Water with Additive Stored Pressure extinguishers

Lighter and more effective than standard water extinguishers

Thomas Glover and Company are delighted to launch their new Water with Additive extinguisher. Because of the enhanced performance of these extinguishers the size of the unit has been reduced without compromising safety, so they're ideal for offices or areas where space may be at a premium.

The additive provides quicker flame knock-down compared to standard water extinguishers which allows the unit to be made at a smaller size and a lighter weight, but with improved fire fighting capability.

- Lighter weight and more effective on Class A fires than normal water extinguishers.
- High grade brass head assembly ensures reliability and optimises efficiency.
- Spray nozzle ensures wide coverage.
- 15 bar working pressure.
- These models have passed the 35kv conductivity test and are safe to use in close proximity to electrical equipment.
- Available in 3ltr and 6ltr capacity.
- 3ltr fire rating = 13A
- 6ltr fire rating = 21A
